Trendcolor

Company Overview

Trendcolor is a contract manufacturer (CMO) of cosmetic products (mainly for face, eyes and lips), its main products are eye shadows, lip glosses and lipsticks, blushes and bronzers.

Investment Rationale

- Wide range of cosmetic products with a portfolio of over 400 proprietary custom formulations
- Taylor-made approach with products dedicated to the growing indie brand and luxury brand market
- Premium positioning in a high-growth market
- State-of-the-art machinery and equipment

Value Creation Plan

- Customer base diversification and commercial development
- Managerialization and introduction of new commercial resources
- Structuring the company in terms of accounting and performance control

⁽ⁱⁱ⁾ Current NFP includes severance pay debt and refers to the Q1 2025

⁽ⁱⁱⁱ⁾ Calculated on the basis of the investment date of FARE NH and NKB (≠ Entry date)

Update Q1 2025

- In the first three months of 2025, the company recorded strong revenue growth compared to the same period of the previous year (€6.5m vs €1.5m), in line with budget expectations. January marked a record month in terms of revenue (€3.3m). Adjusted EBITDA IAS17 amounted to €1.4m (21%).
- This strong growth was driven by the following key factors :
 - **Continued growth in new clients**, primarily Cosnova (Germany), which generated approximately €0.9m in revenue in the first quarter, with a full-year projection of €2.0m.
 - **Strong growth in the US market** following commercial investments made in 2023 and 2024, resulting in US revenue of approximately €3.3m in 2024 (from nearly zero in 2023). Growth continues thanks to: (i) increased orders from customers acquired in 2024 (e.g., REM, Tarte, Victoria Jackson), and (ii) the addition of new clients (e.g., Rare Beauty). US revenue for 2025 is estimated at €7.5m.
- In terms of profitability, the Company recorded an increase in the EBITDA margin compared to Q1 2024, with values aligning with the budget forecasts. The Company has implemented actions to improve production efficiency (including planning based on forecasts from key clients and securing raw materials, primarily), and is therefore managing to maintain an average monthly revenue of around €2.0m. This enables the company to better absorb fixed costs and generate sufficient cash flow to manage various business processes more efficiently and promptly.
- With increasing volumes, in line with the budget and the current portfolio of orders, the Company expects to further improve the EBITDA margin, thus achieving the targets set in the 2025 budget.

Projects update:

- In 2025, a further increase in revenue is expected (an additional €5.0m to €7.5m compared to 2024, corresponding to +34%/+50%), driven by broad-based growth across America, Europe, and Italy. Specifically, the following are the main projects in the Company's pipeline that will support the achievement of the set goals:
 - **REM Beauty (USA):** several new projects have been won (including a new palette, fembot stick, and liquid shadow), expected to generate approximately €3.5m in annual revenue;
 - **Beauty Pie (UK and USA):** significant growth from this long-standing client, with increased sales volumes of the concealer, expected to generate nearly €1m;
 - **Cosnova (Germany):** a mass-market client. Project "Blushing Charm Multi-Stick" has been won, and a brief is open for the "Magic Shaper Contour Stick." The potential value for the year is about €2.1m;
 - **D&G (Italy):** project awarded for the new "Bold 12-position" palette, scheduled for delivery in November 2025. Value: €1.1m;
 - **HUDA (Dubai):** project won for a "face quad" after years of only launching eye palettes. Launch value is €1.4m. Strong likelihood of winning a "mascara" brief for 2026, with potential value of €2m;
 - **HCT (USA):** a long-standing client, but significant growth is expected this year thanks to the project for Victoria Jackson's brand ("no make-up make-up"), estimated at around €1.6m for the year;
 - **Veralab (Italy):** project won for "Chromosphere Skin Perfector," worth approximately €1.2m, with delivery scheduled for June 2025;
 - **TARTE:** estimated annual value of around €1.7m, linked to the "setting powder" project won in 2024.
- Thanks to the ongoing commercial effort to diversify the client base, the main client Huda Beauty is expected to account for less than 40% of total revenue in 2025 (vs 80–85% in 2022).
- As of March 31, 2025, the Company registered a turnover of €6.5m (vs €1.5m as of March 31, 2024) and holds an order backlog worth an additional €12m. The 2025 budget of €20.5m has already been achieved at 90%.

Commercial Initiatives:

- Trade shows expected in 2025: Miami in January (as visitors), LA in February (with a Trendcolor booth), as well as Bologna in March (Cosmoprof), Paris in June (with a Trendcolor booth), and NY in September (with a Trendcolor booth). In addition, the Sales Team will carry out several trips across the US and Europe, complementing the numerous client visits received this year as well. All of this confirms an increasingly attentive and dedicated market presence, which leads clients to perceive the Company as close and constantly engaged in meeting their needs and in proposing new and differentiated solutions compared to the competition.

Focus on US tariffs and potential impacts on Trendcolor: The Company sells its finished products on an EX-WORKS basis; consequently, it has no visibility on potential impacts related to transportation and/or customs costs upon entry into the United States. The current internal assessment is to wait and monitor how the situation evolves globally, while aiming to support our US clients through cost-saving initiatives such as improving logistics flows via aggregated MOQs. Initial discussions with our US clients show alignment with Trendcolor's approach: namely, to thoroughly understand how and to what extent this financial measure will impact the end customer. All orders for 2025 have been confirmed, and ongoing 2026 projects have not experienced any delays. It is also worth noting that brands typically apply a markup of 8 to 12 times the production cost, and a reasonable extra cost has already been factored in.

Ilma Group

Company Overview

ILMA operates in the field of design, processing and marketing of wooden structures for construction carpentry. The company produces roofs in solid or laminated wood, wooden structures for civil/commercial use and infrastructure.

Investment Rationale

- Potential for business expansion with the development and marketing of other product categories (e.g. window and door frames, ...)
- Positive market trend related to the use of sustainable materials with low ecological impact
- Strong brand and good reputation in the market

Value Creation Plan

- Promoting customer base diversification and commercial development
- Growth by external lines in order to increase the range of products and opening up new markets
- Geographical expansion, from regional to national
- Expansion and modernization of production plant and machinery, digitalization, branding and communication

Update Q1 2025

- In Q1 2025, the ILMA Group recorded sales of €4.6m, reporting an increase of +12% over the same period of the previous year (€4m). Overall, the value of production was below budget (-21%). The largest deviation from budget was mainly attributable to Ilma (-32%), due to delays incurred in the delivery of some orders as a result of technical and bureaucratic timing of construction sites. At the product level, wood structures were mainly impacted, a growing sector on which the company is focusing, thanks in part to the opportunities offered by the NGEU.
- Despite lower-than-expected revenues, the commercial strategy put in place by Ilma, based on the extension of the geographical area served and the differentiation of its commercial offer, brought a significant order intake in the first three months of the year, with a total amount of €7.8m of orders acquired, and an order backlog of €13.5m, (more than doubled compared to the same period in 2024).
- At the margin level, there are no major changes, both in terms of “internal” variable costs (e.g., raw material cost, energy cost for production, third-party processing...) and “external” variable costs (e.g., outbound transportation costs, services on site, agent commissions). Group contribution margin amounted to €1.8m, or 39% of sales, higher than budgeted, within which a slight decline in margin was expected due to the negative impact of product mix related to Leap's orders, which at the end of March had not yet been realized.
- The group's fixed costs increased over the previous year as a result of the growth strategy pursued, and are substantially in line with budget forecasts, with a slight deviation mainly due to the costs of technical consultancy and maintenance work carried out ahead of schedule. It should also be noted that the lease of Leap Factory's business unit resulted in the occurrence of fixed costs in the first three months of the year totaling €352 k.
- Adjusted EBITDA is negative (-€264 k) and lower than 2024 and the budget, due to the greater impact of fixed costs due to lower sales than budgeted
- Non-recurring costs include discontinued costs related to consultants and employees who no longer work with the group and have not been replaced, compensation of non-operating members of the BoD, and other extraordinary costs.
- The group's NFP is affected by liquidity strains due to a more rigid cost structure, combined with slippages in the delivery dates of some contracts incurred in the first quarter.

Commercial update Q1 2025

- **Ilma:** continues the strategy of extending the area manned by the sales force beyond provincial and regional borders, with orders also acquired in Valle d'Aosta, Tuscany, Lombardy, Lazio and Puglia. Another market that the company observes with interest and has already supplied in recent months is France. The wooden structures sector is confirmed to be the one of greatest interest in the market, with a total order backlog of more than €6 m at the end of March. Thanks to the strengthening of the company's production capacity brought by the acquisition of the new X-Lam cutting center, the company is able to meet this increase in demand, being able to take full advantage also of the opportunities offered by the NGEU.
- **Leap:** in the first months of 2025, the company acquired orders totaling €2.2 m, €1.7 m of which related to the construction of a housing complex in Switzerland. The innovative design and technology of the company's structures may represent another opportunity for the Ilma Group to increase its visibility internationally as well.
- **Fas:** a streamlining of the sales network is underway to implement a strategy based on a more proactive approach to the market, also taking advantage of opportunities arising from Ilma's reporting of work. The strategy for submitting commercial bids to clients has also been changed, in order to have an initial proposal that will enable the company to be more competitive in the eyes of clients, increasing the likelihood of order acquisition.

ACT Blade

Company Overview

ACT Blade is an Italian-Scottish group active in the production of innovative wind blades (lightweight blades that maximize energy production) and in the research and development of new solutions for the wind energy market.

Investment Rationale

- Team with international experience in windmill blades, marine and aerospace sectors
- Intellectual property protected by patent already recognized in major international markets

Update 2024

- The order to Suzhou Titan Composites Technology for the production of 6 spars (Spar) and associated ribs (Ribs) for the first 6 wind turbine blades, 5 of which will be for certification and POC made in collaboration with ENEL GREEN POWER (which will later have the option to purchase 24 blades from ACT Blade) was completed and delivered at the current Enel Quartarella plant in Brindisi, where ACT Blade has been authorized to produce since February.
- With the support of five full-time workers, production will be completed by the first week of July 2025, with the issuance of the Component Certificate. As of June 23, in fact, all three blades will be completed and ready to be delivered and assembled on the Enel turbine at the Pietragalla (PZ) wind farm in mid-July; assembly is the key step to start the tests necessary for the release of the Proof of Concept, expected by October 2025.
- Tests related to Product Certification have been completed, while an international patent regarding the Lightning Protection System is in the process of being obtained.
- After obtaining the first tranche of financing with Banca Intesa of €1.25m, the company is pursuing talks with potential financial partners interested in participating in the ACT Blade project to support the last preparatory activities for obtaining the POC and to support the investments necessary for the next step of industrialization of the business.

Plyform

Company Overview

Plyform is a company specialized in the production of composite materials components, in particular carbon fibre structural and aerodynamic parts with different technical properties for fixed wing, rotary wing and drone aircraft (civil and military markets).

Investment Rationale

- Leadership in the production of carbon fibre components for the aerospace industry
- Production of high value-added components
- Presence in the motorsport sector with potential for growth

Value Creation Plan

- Expansion within existing sectors (e.g. aerospace and motorsport) characterized by positive market trends
- Acquisition of new customers through dedicated commercial initiatives
- Development of synergies with LMA (a portfolio company of Orienta) and start of production of “hybrid” aluminium-composite components (parts with high market demand)

Historical Financials

Ownership and Capital Structure

In August 2024 FARE Composito acquired the minority stake held by Holding Boscolo, rising up to 100% of Plyform Composites

Update Q1 2025

- Plyform's revenue as of March 2025 stands at €5.5m (+€1m or +22.6%) compared to March 2024, fully in line with budget forecasts. The increase is driven by an expansion of production capacity and a partial recovery in operating efficiency; However, the impact of the investment in the San Gillio plant not yet fully reflected in the results, as the site was still in ramp-up in March 2025 and entered full production only in April.
- The cost of goods sold (COGS) ratio stands at 53.2%, showing a significant improvement compared to March 2024, mainly due to more effective procurement management. The Gross Margin reaches approximately €2.6m in absolute value, up from €1.9m in the prior-year period; the gross margin rate rose from 43.2% to 46.8%.
- The contribution margin stands at €1.1m in 2025 (+€645k or +9.7 %age points vs. 2024).
- EBITDA for the first quarter of 2025 amounts to €438k, showing a significant improvement compared to the same period of the previous year. Adjusted EBITDA amounts to €543k (9.8% of revenues).
- The Net Financial Position as of March 31, 2025, stands at €9.6m.

Highlights Backlog

- In March, the **backlog** declined mainly due to **deliveries** made in the first months of the year and due to an activity of **selection and renegotiation** of some orders, aimed at optimizing the order portfolio and supporting the **target margins**.
- The acquisition of the San Gillio plant has allowed the Varallo Pombia site to meet demand for specific parts; After its initial ramp-up, the new facility also began generating third-party business, notably with Persico. The additional capacity at San Gillio has already been pitched to two customers: Leonardo Aerostructures and Thales Alenia, respectively for the commercial aircraft and space sectors.
- Renegotiation **with Piaggio Aerospace and Dallara** are under way to update contract terms in line with the current cost environment and safeguard profitability.
- On the Leonardo Helicopters front, the **commercial team** is focusing on consolidating and expanding orders for the AW09 program, in view of the higher volume envisaged in the client's industrial plan.

Tariff Update: As of today, Plyform's backlog does not include direct exports to the United States, materially limiting the company's exposure to potential U.S. trade-tariff risks.

Ongoing

Production Efficiency and Management Control

- In the early months of 2025, the Administration, Finance, and Control department was strengthened by the addition of a new administrative manager. The goal is to support and accelerate the improvement process of the quality and accuracy of both production and financial data, enabling more timely and integrated monitoring of company performance.

Settlement Agreement with Leonardo

- In recent months, discussions have been initiated with the client Leonardo, resulting in the agreement of a settlement related to specific programs. This amount will be collected in the coming months of 2025 and will have a direct positive impact on operating margins.

Plant 4: San Gillio

- The new production facility in San Gillio (Turin) became operational in March 2025 and, after a brief ramp-up phase, began full-scale lamination and polymerization activities in April. Equipped with a large autoclave, the plant will remove current bottlenecks, increase volumes, and enable the production of components that were previously not manufacturable. Revenues generated by the facility is projected at roughly €2m for FY25 .

Bierrebi

Company Overview

Bierrebi is a company operating in the field of design, production and distribution of textile cutting machines, mainly for the manufacturing-textile and medical sectors.

Investment Rationale

- High marginality of business and market leadership in the tubular fabric cutting machinery segment
- Historical relationship with customers needing to replace their installed fleet
- International footprint with subsidiaries in USA and India (covering main basic apparel areas)

Value Creation Plan

- M&A to expand the range of solutions (e.g. open fabric)
- Strengthening of commercial structure in order to consolidate customer portfolio and open new markets (medical textile)
- R&D for the application of current technology on new fabrics/materials (Kevlar and carbon/ Fiber-glass)

Ownership and Capital Structure

Update Q1 2025

- In Q1 2025 there is a slight positive variance from budget forecasts, with an increase in revenues of about €31 k. However, comparison with Q1 2024 shows an overall decline in revenues of about €1.1 m. The most significant decline is seen in the machinery category, which shows a contraction compared to the same period of the previous year. This result is mainly attributable to the general decline in consumption in the textile sector, which was further impacted by the duty policy imposed by the U.S. administration.
- The difference of about €120 k for the machines item between the actual and budget 2025 figures is given by a lower incidence of optional extras on the overall price of machinery. In contrast to the performance of the other business lines, the business line related to Consumables shows an improving performance both compared to the first quarter 2024 and in comparison to the budgeted figure. In contrast, there is a decline in sales related to technical support services, down both compared to the actual figure in the first quarter of 2024 and compared to the budgeted figure.
- In Q1 2025, the company shows a significant increase in Gross Margin percentage to 85%, an improvement over both the figure recorded in the same period of 2024, which was 76%, and the forecast made in the budget. This result is mainly attributable to the favorable sales mix recorded in the period.
- The increase in Freight costs is due to a higher volume of shipments to the U.S. subsidiary and a different accounting reclassification of logistics expenses recharged to the customer, amounting to about €15 k in the first quarter.
- The increase in G&A and Selling Expenses is due to a more precise allocation of the U.S. subsidiary's personnel costs, which are attributed to the relevant business functions rather than charged generically to Indirect Costs.
- EBITDA came in at €611 k (EBITDA Adj € 710 k), up from expectations. The different sales mix achieved allowed, in spite of lower sales, to achieve a higher margin level than estimated.

Main activities 2025

During 2025, the company does not expect a sudden recovery in machinery sales. At the moment, the main customer, based in the U.S., which was to carry out the replacement of the machinery fleet and the setting up of them in Bangladesh, has postponed its investment.

The company's business strategy will therefore focus on:

- Consolidation of some existing clients within Bierrebi's portfolio.
- Reaching out to new customers in geographic areas already covered by the company. Screening of business opportunities in new countries.
- Consolidation of some existing clients within Bierrebi's portfolio.

The company is implementing targeted business expansion strategies in strategic markets such as India, South America and Africa. In these territories, significant investment is being made in marketing activities and the creation of a network of local agents, with the aim of consolidating its presence and responding to specific consumer needs and regional market dynamics.

Direct duties impact

- Prior to the recent increase imposed by the Trump administration, duties on Bierrebi products exported to the US were 3.5%. In April, however, a 10% increase (instead of the originally planned 25%) was applied, bringing the total duty to 13.5% for the category corresponding to HTS Code 8451.90.90, which includes Bierrebi machinery, consumables and spare parts.
- Duties are applied in the country of customs clearance. Thanks to its logistics platform in Honduras, Bierrebi is able to carry out customs clearance locally and directly serve markets on the American continent, thus avoiding the application of duties on supplies destined for neighboring countries. Only shipments bound for the United States, which account for about 20% of Bierrebi USA's total sales, remain subject to customs duties. Again, the estimated impact for the remaining months of 2025 is limited to about \$14k, confirming the marginality of the overall effect of duties on the company's economic performance.
- For supplies subject to duties, management has already initiated interlocutions with the affected customers, finding full willingness to absorb the price increase resulting from customs duty. Therefore, there are no critical issues in passing on the extra cost to the final price.

Contrader

Business Overview

Contrader, founded in Benevento in 2016, is a company specialized in digital transformation, tech and engineering consulting services.

Investment Rationale

- Innovative company in the ICT consulting sector with excellent market positioning
- Positive market trends
- One-stop shop in the tech consulting (ICT & engineering counselling, network & IT infrastructures, business applications, processes, governance, ...)

Value Creation Plan

- Managerialization (CEO, CFO, HR manager, ...)
- Development of business through a new commercial team with an extensive expertise in the tech consulting
- Expansion of client portfolio
- M&A in a highly fragmented industry

Customer portfolio: established, new and potential clients

Customer Portfolio Contrader

The company is pursuing the new strategy developed by management, which aims for significant growth in the Tech Consulting business through i) the consolidation of the current client portfolio and ii) the acquisition of new direct clients, offering both digital ICT consulting and engineering consulting services. Below is an overview of Contrader's main clients, categorized as established clients, new clients acquired in 2025, and prospective clients currently in advanced negotiations.

Need and new Clients Consulting Area

“Market Need“ and talent search

The Contrader Group actively develops talent search initiatives and, consequently, internal training activities, in line with current market demands (so-called "Needs"). At present, as shown by the company's survey on its client portfolio, the majority of requests concern skills and profiles related to the Engineering segment, which represents 63% of total needs.

The Group is focusing its efforts on addressing the needs related to the Engineering macro-area, launching specific promotion and development initiatives, as this segment is also characterized by higher margins and lower competitive pressure compared to other business areas.

To meet the growing market demand for highly specialized resources in the engineering field, the Contrader Group is implementing a targeted talent search and training strategy. In particular, since January 2025, two key data points have emerged that deserve attention:

- 32 new hires exclusively within Contrader Engineering;
- 77% of the new hires hold a university degree, indicating a higher level of specialization and being perceived as higher-value profiles by the end client.

HR activities focused on talent search and selection are therefore crucial to attracting high-level professionals and bringing in new specialized skills. Below is a list of recruiting events and initiatives in which the company has participated or will participate:

ROMA- Career Fair

Rome Business School, march 2025

UniMe Recruiting DAY

Messina University Hub, may 2025

Napoli – Gestionale Meets the Future

Napoli, Villa Floriana, may 2025

BARI – Poba Career Fair

Polytechnic University of Bari, may/june 2025

Focus New Projects Consulting Area

The following analysis provides an overview of the progress made in strategic negotiations and discussions with key clients, highlighting the opportunities and collaborations expected for 2025 in the ICT (Information and Communication Technologies) and Engineering segments:

ICT:

Presidency of the Council of Ministers

A tender has been issued for 5 technicians specialized in .NET and Java software development (approximately € 540k per year)

AS - Watson

Test automation activities on custom applications are about to commence (€ 130k)

AELONG

Proof of Concept (PoC) implementation for Palantir integration (€ 65k)

Engineering:

THALES RCS

Embedded software development activities on ticketing systems (€102k / 6 months)

GEWISS

Awaiting green light for a new project aimed at reducing “electronic” barriers in favor of people with disabilities (approximately € 110k)

LEONARDO

3 new technicians billed to the Electronics Division and GCAP Program (€ 216k)

Pirelli

Contrader has been accredited as a new supplier, and embedded software development activities have now commenced

Strictly private and confidential

Fixed Projects – Projects in the pipeline

Fixed Project

Revenues related to the so-called Fixed Projects (turnkey projects) refer to the sale of software tailored to specific client requests and can apply either to existing platforms or to new designs. In April, Fixed Project revenues amounted to approximately €210k, in line with management expectations, while the anticipated pipeline, with a realization rate exceeding 50%, would ensure a backlog of about €1.1 million by May 2025.

Below is a list of the main projects in the pipeline, along with their respective probability of realization, categorized by market segment: Engineering/ICT and Lifescience.

Fixed Project – Engineering/ICT

Clients	Project	Realization rate %	Project estimate (€)
Leonardo	Digitalization Test Bench	100%	108.000
Casa di Cura S. Francesco	AI / Casa di Cura SanFrancesco	100%	126.000
Presidency of the Council of Ministers	Arianna fase 3	100%	54.570
Empoli FC	Server update	100%	4.800

Bormioli Pharma	CSV ERP	50%	12.600
SemData – Recipharm	CSV HPLC + Polarimetro	50%	11.700
SemData – Recipharm	CSV_HPLC_nuovo PC	50%	6.210
Esoate	Bitcube - Checkmarks	50%	8.700
TOT. FPP LS > 50%			218.840
TOT. FPP LS < 50%	Other projects with a probability of realization below 50%	< 50%	145.010
TOT. FPP ENG/ICT			363.850

Fixed projects in the Lifescience/Pharmaceutical area amount to approximately €364k, split as follows:

- € 219 k worth of projects with a probability of realization greater than 50%
- € 145 k worth of projects with a probability of realization less than 50%

Notes:
⁽ⁱ⁾ The Company has a Business Manager specialized in the Lifescience/Pharmaceutical sector

Timeline Composizione Negoziata (CNC) and Concordato and next steps

Timeline Procedure and Financial Plan

The Company is progressing with the Negotiated Settlement of the Business Crisis (CNC) and the Composition with Creditors (Concordato), alongside the implementation of the planned financial restructuring measures. This will enable the business turnaround and ensure continuity, indirectly preserving the core business of Tech Consulting, the company's know-how, and employment levels. Below is a timeline summarizing the activities related to the Concordato and CNC procedures that the Company has already completed, as well as those scheduled for the upcoming months:

Strictly private and confidential

Operational activities completed and next steps

Below is a list of additional activities carried out on the Contrader project for which Orienta has provided a dedicated ad hoc team:

- Appointment of the C.R.O. (Chief Restructuring Officer) Giovanni Diana from february 2025;
- Recovery of commercial receivables owed to the Group's companies through the Grassani Law Firm;
- Litigation activities and claims for indemnification to be initiated against the seller, Sabatino Autorino;
- Exclusion of Sabatino Autorino from the companies' administrative bodies as director and revocation of operational powers;
- Reorganization and restructuring activities: cost cutting and process optimization;
- Search for industrial partners: the company is currently engaged in discussions with several potential industrial partners to develop operational and commercial collaborations and initiate dialogue aimed at defining a possible exit strategy.
