Trendcolor

Company Overview

Trendcolor is a contract manufacturer (CMO) of cosmetic products (mainly for face, eyes and lips), its main products are eye shadows, lip glosses and lipsticks, blushes and bronzers.

Investment Rationale

- Wide range of cosmetic products with a portfolio of over 400 proprietary custom formulations
- Taylor-made approach with products dedicated to the growing indie brand and luxury brand market
- Premium positioning in a high-growth market
- State-of-the-art machinery and equipment

Value Creation Plan

- Customer base diversification and commercial development
- Managerialization and introduction of new commercial resources
- Structuring the company in terms of accounting and performance control

⁽ⁱⁱⁱ⁾ Calculated on the basis of the investment date of FARE NH and NKB (≠ Entry date)

Update H1

- In the first half of 2025, the company registered strong revenue growth compared to the same period of the previous year (€12.5m vs €4.8m), in line with budget expectations. January marked a record month in terms of revenue (€3.3m). Adjusted EBITDA IAS17 amounted to €2.7m (22%). The strong growth was driven by the following main factors:
 - **Continued growth in terms of new client acquisition.** Cosnova (Germany), in particular, generated approximately €1.1 million in revenue in the first half of the year, with a full-year projection of €2.0 million.
 - **Strong growth in the US market** following 2023–2024 investments in the commercial area, which led to US revenues of approximately €3.3 million in 2024 (from almost zero in 2023) to expected revenue of around €7.5 million in 2025. Growth continues thanks to (i) increased orders from clients acquired in 2024 (e.g., REM, Tarte, Victoria Jackson) and (ii) the onboarding of new clients (e.g., Rare Beauty).
- In terms of profitability, the Company registered an increase in EBITDA margin compared to the same period in 2024, with figures in line with budget expectations. The Company has implemented actions aimed at streamlining the production process (including planning based on forecasts from key clients and the consequent procurement of raw materials), Therefore, the company is managing to maintain an average monthly revenue of around €2 million. This allows the Company to better absorb fixed costs and generate cash flow sufficient to manage business processes more efficiently and promptly.
- With the increase in volumes, in line with the budget and with the already acquired order portfolio, the Company expects to further improve EBITDA margin, thus achieving the objectives set out for 2025.

Key Projects

In 2025, further improvement in terms of revenue is expected (+€5.0/7.5m compared to 2024), driven by growth in America, Europe, and Italy. The following are the main projects in the Company's portfolio that are key to exceeding the budget:

- **REM Beauty (USA):** multiple newly awarded projects (including a new palette, stick fembot, liquid shadow) expected to generate around €3.5m in revenue for the year;
- **Beauty Pie (UK & USA):** significant growth from this long-standing client, with a resulting increase in sales volumes for the concealer, expected to generate nearly €1m;
- **Cosnova (Germany):** mass-market client. Projects awarded include the blushing charm multi-stick and magic shaper contour stick, for a total annual value of around €1.7m;
- **D&G (Italy):** project awarded for the new bold 12-shade palette, with delivery expected in November 2025. Estimated value: €1.1m;
- **HUDA (Dubai):** project awarded for a face quad, after years of HUDA focusing solely on eye palettes. Total value for blush lighter and filter palette: €2.1m. High probability of winning the mascara brief for 2027;
- **HCT (USA):** long-standing client of the Company, which has grown significantly this year thanks to the project linked to the Victoria Jackson brand (no make-up make-up), with expected annual revenue of around €1.5m;
- **Veralab (Italy):** project awarded for "chromosphere skin perfecter" worth approximately €1.2m, mostly delivered by June 2025;
- **TARTE:** estimated annual value of around €1.3m, related to the setting powder project awarded in 2024.

Thanks to the ongoing commercial push aimed at diversifying the client base, Huda Beauty is expected to account for less than 40% of total revenue in 2025 (vs 80%/85% in 2022). As of June 30, 2025, the Company has invoiced €12.5m (vs €4.8m as of June 30, 2024) and has an order backlog of an additional €11m.

Commercial initiatives

- Trade shows expected in 2025: Miami in January (as visitors), LA in February (with a Trendcolor booth), as well as Bologna in March (Cosmoprof, with a joint booth alongside INUNUP under the "TRENDUP" concept), Paris in June (in collaboration with INUNUP under the "TRENDUP" concept), and NY in September (with a "TRENDUP" booth). In addition, numerous trips to the US and Europe by our Commercial Team were made, adding to the many client visits received this year. All of this confirms an increasingly focused and dedicated market presence, leading clients to perceive the Company as close and consistently present—capable of anticipating their needs and offering new and differentiated solutions compared to competitors.

Ilma Group

Company Overview

ILMA operates in the field of design, processing and marketing of wooden structures for construction carpentry. The company produces roofs in solid or laminated wood, wooden structures for civil/commercial use and infrastructure.

Investment Rationale

- Potential for business expansion with the development and marketing of other product categories (e.g. window and door frames, ...)
- Positive market trend related to the use of sustainable materials with low ecological impact
- Strong brand and good reputation in the maket

Value Creation Plan

- Promoting customer base diversification and commercial development
- Growth by external lines in order to increase the range of products and opening up new markets
- Geographical expansion, from regional to national
- Expansion and modernization of production plant and machinery, digitalization, branding and communication

Ilma Group

Update H1 2025 (1/2)

- In Q2 2025 Ilma Group recorded **revenue of €10.2m (+36% YoY)** versus €7.5m in Q2 2024. **Versus budget**, revenue is **-31% at Group level**, with **Ilma at -35%**, which explains most of the variance. The gap mainly reflects slippage in the progress of certain job sites, with a greater impact on the **timber structures** line. These volumes are **deferred, not lost**, and are already covered by a **solid and growing backlog**, also supported by opportunities from the **National Recovery and Resilience Plan (PNRR)** in energy retrofits and public buildings, underpinning catch-up in H2.
- The Group kept the **incidence of direct variable costs stable** (raw materials, third-party processing, energy), with **no material changes in external costs** (transport, on-site services, sales commissions). The **contribution margin stands at €3.9m (38% of revenue)**, **above budget**, which had anticipated a slight decline linked to the **Leap** mix that was not yet underway by end-June. Preserving margin remains a key focus amid **higher competitive pressure**—players willing to bid at lower margins—and **commodity volatility** passed through by suppliers. The Group continues to enforce **pricing discipline, selective order intake, and tight procurement control** to safeguard profitability.
- Fixed costs are **higher than last year** both in absolute terms and—more importantly—**as a percentage of revenue**, due to lower volumes in the semester. The **budget overrun** is mainly driven by **higher staff costs at Fas Serramenti** in line with the commercial/technical build-up. Looking at the **YoY bridge** in Group **staff costs (Q2'24: €1,937k → Q2'25: €2,356k; +€419k, +21.6%)**, the increase is driven by: **Production +€171k, Administration & Management +€101k, Commercial +€61k, and Technical +€41k**—overall reflecting **workforce reinforcement**.
- About **Leap Fixed costs €507k (G&A €417k, including the business-unit lease €331k; Technical fixed €65k; Staff €25k)**, against **~€52k YTD revenue**. Contribution is **not yet at run-rate**.

Update H1 2025 (2/2)

- **Adjusted EBITDA is –€27k**, an improvement vs 2024 but **below budget** due to **temporary deleverage**: volumes are still below the envisaged scale, which makes fixed costs weigh more. With backlog execution and **Leap's ramp-up**, fixed-cost incidence is expected to **normalise in H2**. Pro forma Adj. EBITDA excluding Leap's business-unit lease is €304k.
- **Non-recurring items** include fees for consultants, severance/people no longer in the Group and not replaced, fees to **non-executive** Board members, and other extraordinary items.

Commercial Update

- **Ilma**: The commercial footprint continues to expand beyond provincial and regional boundaries, with new contracts in Valle d'Aosta, Liguria, Tuscany, Lombardy and Lazio. A more structured entry into the French market is being assessed, where supplies have already been made in recent months. The timber structures segment remains the most dynamic, **with a backlog in excess of €6m as of 30 June. In parallel, the backlog for traditional roofs is leaner and below budget, yet still above YTD 2024 levels**, confirming that demand remains higher than last year despite a prudent stance and the expected normalisation. The acquisition of the new **X-Lam cutting** centre has increased capacity and operational readiness, enabling the company to capture demand growth and leverage PNRR-related opportunities.
- **Leap**: In H1 2025, orders totalled **€2.2m**, **€1.7m** of which relate to the construction of a **12-unit residential building in Switzerland**. Leap's architecture and advanced technological solutions provide a competitive advantage for Ilma Group, strengthening its positioning and visibility internationally. A **distribution agreement with an Israeli partner** for Leap homes is under negotiation.
- **Fas**: The optimisation of the sales network continues, with the goal of adopting a more proactive go-to-market approach, supported by leads referred by Ilma. The new commercial strategy and the revamped way of presenting offers to clients have had a positive impact on margins, which are improving year on year.

Backlog H1 2025

ACT Blade

Company Overview

ACT Blade is an Italian-Scottish group active in the production of innovative wind blades (lightweight blades that maximize energy production) and in the research and development of new solutions for the wind energy market.

Investment Rationale

- Team with international experience in windmill blades, marine and aerospace sectors
- Intellectual property protected by patent already recognized in major international markets

Update H1 2025

- The order for the production of 6 spars (Spar) and associated ribs (Ribs) for the first 6 wind turbine blades made in collaboration with ENEL GREEN POWER has been completed and delivered to the current Enel Quartarella plant in Brindisi. The blade assembly phase started in May, but has experienced some delays compared to the original schedule.
- ACT Blade plans to complete the production of the first three blades by September, with the issuance of the Component Certificate. The three blades will be delivered and assembled on the Enel turbine at the Pietragalla (PZ) wind farm, and their installation will represent a key step in launching the tests necessary for the release of the Proof of Concept, expected by the end of the year. In addition, the company is currently in the process of obtaining the international patent for the Lightning Protection Systems.
- The company is in talks with potential European and international financial partners interested in participating in particular in the industrialization phase that will follow the achievement of the POC.
- ACT Blade is developing relations with potential customers, both national and international, with the aim of creating new business opportunities, thus enabling the industrialization project to be launched once Proof of Concept has been obtained.

Plyform

Company Overview

Plyform is a company specialized in the production of composite materials components, in particular carbon fibre structural and aerodynamic parts with different technical properties for fixed wing, rotary wing and drone aircraft (civil and military markets).

Investment Rationale

- Leadership in the production of carbon fibre components for the aerospace industry
- Production of high value-added components
- Presence in the motorsport sector with potential for growth

Value Creation Plan

- Expansion within existing sectors (e.g. aerospace and motorsport) characterized by positive market trends
- Acquisition of new customers through dedicated commercial initiatives
- Development of synergies with LMA (a portfolio company of Orienta) and start of production of “hybrid” aluminium-composite components (parts with high market demand)

⁽ⁱⁱⁱ⁾ Calculated on the basis of the investment date of FARE NH and NKB (≠ Entry date)

Update July 2025

- Plyform's actual revenue in **July 2025** amounts to **€13,6m, €1,6m (-12%)** below the budget forecast (**€15,2m**). Although revenues in the first seven months of 2025 are significantly higher than in the previous year (**+14,0%**), the shortfall versus budget is mainly attributable to the lack of progress on certain processing activities due to plant stoppages and temporary operational issues (e.g., the stoppage of the numerically controlled machine in May), which management has already addressed through technical and organisational solutions (e.g., engaging an external supplier for “numerical control” machining);
- Cost of goods sold (COGS)** amounts to **€7.5m**, equal to **55.4%** of revenue, up **1.9 p.p.** versus the budget projection (53.5%). The higher COGS incidence is attributable to a less favourable product mix, characterised by components with lower value added than planned. The shortage of certain critical raw materials for specific programmes, an issue affecting the entire sector, also had a negative impact, slowing production and necessitating recourse to alternative suppliers at higher cost.
- The **contribution margin** amounts to **€2,3m**, representing **17,0%** in line with (**17,8%** budgeted), slightly penalised by a higher incidence of material consumption and an increase in plant maintenance costs.
- Fixed and overhead costs** total **€1,8m**, higher than budget both in absolute terms and as a percentage of revenue (**+3,5 p.p., from 9,8% to 13,3%**). The increase is mainly due to growth in indirect and production headcount, particularly as a result of hires at the new San Gillio plant in the first part of the year. The second half will be marked by a slowdown in new hiring, while still supporting growth, favouring a normalisation of the trend.
- EBITDA** stands at **€0,5m (3,7% of revenue)**, below the budget figure (**€1,2m, equal to 8,0%**). **Adjusted EBITDA is €0,9m**, with an incidence on revenue of **6,9%**. Total adjustments of c. **€428k** include costs related to the departure of the **CEO** and **COO**; the remainder relates to one-off technical and legal advisory expenses and the normalisation of directors' remuneration.
- The Net Financial Position as at July 2025 stands at **€8,1m**.

Highlights Backlog

- In July, the sales order backlog amounts to a total of €30,9m (an increase of 3% compared to the previous month).
- The company's management is proceeding with the rationalization of the order book, outsourcing certain production to specialised suppliers in order to improve margins on some projects, often with lower added value.
- A reorganisation of the backlog orders is under way to align production scheduling with the customer's actual needs; this initiative will improve production efficiency and enhance working capital management particularly through better management of purchasing and inventory control.

Project Supernal Overview

- Supernal is Hyundai Motor Group's Advanced Air Mobility division focused on developing eVTOL (electric Vertical Take-Off and Landing) aircraft. Hyundai has invested \$6 billion to develop the S-A2, a five-seat electric aircraft designed for commercial operations starting in 2028.
- Plyform has been awarded the contract, with Leonardo as the customer, for the production of large specialised tooling for the lamination of the Supernal eVTOL fuselage, specifically for the production of the lower fuselage keel and the two left and right side panels that make up the aircraft's load-bearing structure. These tools are critical components for the manufacture of primary structural elements of the vertical take-off and landing aircraft, requiring extremely high dimensional precision.
- The project enables the company to further diversify its portfolio towards high value-added sectors within aerospace, strengthening the company's premium positioning through specialist expertise in the urban air mobility segment, in line with the experiences with Electra and Wisk.
- The order related to the Supernal project has a total value of €679k and is structured according to standard procedures for R&D projects, with 80% invoiced upon delivery and the remaining 20% following successful completion of the "First Article Inspection". As at June, €356k had been invoiced, with a further €89k invoiced in July for the production of two lower keels. The program provides for €99k of additional revenue between August and September, for a total of €544k of certain revenue. The €136k balance will be recognized upon completion of the FAIs. An additional order for a trolley, with delivery expected in October and an estimated value of €100k-110k, is also being finalized.
- The key strategic asset for the project is the new San Gillio plant, equipped with a 4x10 metres autoclave, which constitutes a unique competitive differentiator in the European landscape. This industrial infrastructure enables the production of large composite components, positioning Plyform as the only European operator, excluding OEMs, with such production capabilities.

Bierrebi

Company Overview

Bierrebi is a company operating in the field of design, production and distribution of textile cutting machines, mainly for the manufacturing-textile and medical sectors.

Investment Rationale

- High marginality of business and market leadership in the tubular fabric cutting machinery segment
- Historical relationship with customers needing to replace their installed fleet
- International footprint with subsidiaries in USA and India (covering main basic apparel areas)

Value Creation Plan

- M&A to expand the range of solutions (e.g. open fabric)
- Strengthening of commercial structure in order to consolidate customer portfolio and open new markets (medical textile)
- R&D for the application of current technology on new fabrics/materials (Kevlar and carbon/ Fiber-glass)

Update H1 2025

- The group closed the first half of 2025 with a performance broadly in line with revenue forecasts, while reporting a higher than expected margin, both in terms of gross margin and EBITDA margin.
- In terms of revenues, performance was slightly below forecasts in the spare parts segment, but this was offset by sustained growth in consumables.
- The company recorded an increase in gross margin in percentage terms, showing an improvement both compared to the figure reported in the same period of 2024 and compared to budget forecasts. This result is mainly attributable to the favorable composition of the sales mix recorded during the period.
- The increase in freight costs is due to a higher volume of shipments to the US subsidiary and a different accounting reclassification of logistics expenses, amounting to approximately €40 k in the first half of the year.
- The increase in G&A and Selling Expenses is due to a more accurate allocation of the personnel costs of the US subsidiary, which are now attributed to the relevant corporate functions rather than being generically charged to Indirect Costs. Net of the new management allocation, the actual impact of the increase in G&A and Selling Expenses compared to the 2024 period would amount to €134 k instead of the €302 k shown in the table.
- EBITDA stood at €1.5 m (adjusted EBITDA €1.7 m), exceeding expectations. Despite lower revenues, the different sales mix enabled the company to achieve higher margins than estimated.

Contrader

Business Overview

Contrader, founded in Benevento in 2016, is a company specialized in digital transformation, tech and engineering consulting services.

Investment Rationale

- Innovative company in the ICT consulting sector with excellent market positioning
- Positive market trends
- One-stop shop in the tech consulting (ICT & engineering counselling, network & IT infrastructures, business applications, processes, governance, ...)

Value Creation Plan

- Managerialization (CEO, CFO, HR manager, ...)
- Development of business through a new commercial team with an extensive expertise in the tech consulting
- Expansion of client portfolio
- M&A in a highly fragmented industry

Ownership and Capital Structure

Contrader

Customer Portfolio Contrader

The company is pursuing the new strategy developed by management, which aims for significant growth in the Tech Consulting business through i) the consolidation of the current client portfolio and ii) the acquisition of new direct clients, offering both digital ICT consulting and engineering consulting services.

Established Clients

New Clients 2025

Target Clients

The Contrader Engineering's admission to the "CNC", while offering enhanced safeguards in managing customer relations, is causing some critical issues at the commercial level with the companies grouped here, as they are limiting/slowing down the launch of new projects or growth opportunities

Fixed Project

Revenues related to the so-called Fixed Projects (turnkey projects) refer to the sale of software tailored to specific client requests and can apply either to existing platforms or to new designs. In June, Fixed Project revenues amounted to approximately € 401 k, in line with management expectations, while the anticipated pipeline, with a realization rate exceeding 50%, would ensure a backlog of about €1.7 million by July 2025. Below is a list of the main projects in the pipeline, along with their respective probability of realization, categorized by market segment: Engineering/ICT and Lifescience.

Fixed Project – Ingegneria/ICT

Clients	Project	Realization rate %	Project estimate (k€)

Revenues as of 30.06.2025

As can be seen from the table below, revenues in 2025 show a decline compared to the budget and the previous year. Compared to 2024, the first half of 2025 is characterized by significant growth for all customers except Reply (+24%), but the company is suffering from a sharp decline in business with Reply, whose turnover in the first six months of 2024 amounted to almost €2 million.

The delay compared to the budget is caused by:

- a reduction in turnover from the Reply customer;
- a reduction in activities with NTT Data, Lutech, and Sara Assicurazioni customers due to the companies' "CNC" status;
- a slowdown in growth for some existing customers due to their CNC status/low credit rating;
- difficulties in establishing business relationships with new customers due to the company's "CNC" status.

Timeline Procedure and Financial Plan

The Company is progressing with the Composition with Creditors (Concordato) and the Negotiated Settlement of the Business Crisis (CNC), as well as with the implementation of the planned financial restructuring measures. This will enable the business to recover and continue operating indirectly, preserving the core business of Tech Consulting, the company's know-how, and employment levels. Below is a timeline summarizing the activities related to the Concordato and CNC procedures that the Company has already completed, as well as those scheduled for the upcoming months:

Strictly private and confidential

Update ongoing activities

Below is a list of additional activities carried out on the Contrader project for which Orienta has provided a dedicated ad hoc team:

- Opening and completion of the Virtual Data Room (VDR) in preparation for the competitive bidding process;
- Implementation of efficiency and cost reduction measures led by the Chief Restructuring Officer (CRO): reduction of office rental fees, repayment plans with numerous suppliers, reduction of ancillary personnel costs (e.g., rationalization of the company fleet), renegotiation of supply contracts;
- Continuation of the recovery of trade receivables owed to group companies through the Grassani Law Firm;
- At the end of July 2025, the process of removing director Sabatino Autorino from all administrative bodies of the operating companies was completed.
